Find the story.
Prepare the briefing.

CM1 INSIGHT ENGINE / Executive reporting automation
Automated management comments grounded in the margin drivers.

~2.5 hours → **~30 seconds**

Manual reporting preparation* | Python processing after refresh*

THE BUSINESS CHALLENGE

Preparing the executive summary meant manually finding the main story in the numbers and writing management comments. CM1 Insight Engine turns calculated drivers into a repeatable first draft.

WHAT I BUILT

01
Calculate the drivers

Price, volume and residual mix across eight product segments, reconciled to reported totals with flagged adjustments.

02
Identify the main story

Ranks the leading driver and opposing pressure, then drills into products to explain what sits behind the headline result.

03
Draft executive comments

Uses rules and templates to generate management comments and slide subtitles, alongside charts and KPI cards for analyst review.

MANAGEMENT COMMENTARY / ILLUSTRATIVE EXAMPLE

Volume growth lifted margin, but pricing pressure absorbed most of the gain. The main contribution came from Product A.

FROM FINANCE DATA TO MANAGEMENT REVIEW

01 / SOURCE
TM1 extract
